

Refactoring Fraud Detection

Refactor the FraudRadar class. You can make any changes you see that are needed in code or tests. See the tests for more information.

Code Requirements

- All the tests must pass.
- The code must fulfil **OOP** and **SOLID** principles.
- The code must be **maintainable**.
- The code must be **extensible**.
- You must apply **defensive programming** practices.
- Receive the file path is not nice. Think and change the signature and make it cooler.
